Wait

Nickel
\$17,865

Wait

Forecast the future of EV minerals , before your competitors do.

THE PROBLEM

EV supply chains fly blind on mineral prices

Price volatility is extreme

Lithium dropped 80% in 18 months. Cobalt swings $\pm 40\%$ annually. No leading indicators — only lagging news.

Geopolitical risk ignored

DRC controls 70% of cobalt. Indonesia dominates nickel. Supply shocks hit margins without warning.

Decisions are gut-driven

Procurement teams rely on Bloomberg terminals. No systematic framework. No scenario modeling.

THE PRODUCT

Live dashboard

THE SOLUTION

eXante: forecast → shock → decide

What makes eXante different

Real OLS regression

G/P/M shock betas fitted on historical crisis data

Pre-computed scenarios

Instant switching , no live API calls on stage

Log-return SNR

Signal-to-noise ratio drives the buy/hold/wait call

Rigorous methodology, not black-box ML

Data Pipeline

IMF CSV

112 months of Lithium, Cobalt, Nickel, Manganese prices

Sybilion API

Probabilistic 6-month forecast — p10/p50/p90 quantiles

OLS Regression

$\log(P) \sim G + P + M$ — fitted on historical crisis data

Scenario Grid

3 pre-computed shock scenarios (Geo, Policy, Mining)

Decision Engine

$SNR = \mu / \sigma$ — buy when signal exceeds noise threshold

Shock Model

$$\text{shock} = \beta_G \cdot G + \beta_P \cdot P + \beta_M \cdot M$$

$$P_{\text{adj}} = P_{\text{base}} \times \exp(\text{shock})$$

Decision Rule

$$SNR = \mu / \sigma$$

Buy now → $SNR \geq 0.3, \sigma < 0.4$

Hold → $SNR \geq 0.0$

Wait → $SNR < 0.0$

Indonesia oversupply persists.

eXante

The mineral intelligence layer
for the EV transition.

Built at the hackathon with:

- | Sybillion API — probabilistic forecasting
- | IMF commodity price data
- | OLS regression shock model (G, P, M)
- | Chart.js · PptxGenJS · Python

What's next

Real-time price feeds

Live spot prices, not lagged IMF data

Portfolio optimization

Multi-mineral allocation with correlation

API for procurement

Embed decisions into ERP/SAP workflows

More commodities

Rare earths, graphite, copper

Forecast the future of EV minerals, before your competitors do.
